

Concept illustration of Notices to Lunar Missions (NLMs). The figure shows the Moon's south polar region as an elevation map, with crater floors shown in purple and mountain peaks and plateaus in yellow-red. The shaded regions represent three example uses of NLMs. The red region highlights a predicted debris strike corridor, the yellow launch and landing operations, and orange crater floor activities. Many other uses are possible. The background image uses data from the Lunar Reconnaissance Orbiter Laser Altimeter elevation map.
